

ROBUSTUS Sliding Track Wheel (Model: GSTR006)

- The Robustus roller technology allows for a load of up to 70 kg with 2 rollers and up to 140 kg with 4 rollers.
- The single-unit spring steel housing of the Robustus roller assembly has alignment guides and locking struts.
- The alignment guides ensure the self-alignment of the roller assembly in the roller profile in the direction of movement.
- The locking struts are wedged into the roller profile and resist any attempt to move them with increasing retention force. This ensures extremely quiet running.
